rat's brain. Researchers in Norway used this experiment to help determine that the brain makes memories using a kind of GPS navigation system, and codes memories spatially. © Aristide Economopoulos/Star Ledger/Corbis.

How can studies on rats apply to humans? | HowStuffWorks

The rat's body structure and organ systems are relatively similar to those of a human. This similarity provides an interesting look into mammalian anatomy and allows students to make comparisons between humans, rats, and other mammals. Accessible Navigation: quickly access important pages or skip to sections within the page.

On the Cutting Edge: Rat Dissection | Carolina.com

In both human and rodent salivary glands, serous cells in salivary glands are correctly termed 'seromucous'. The distal ends of mucous acini are surrounded by serous demilunes. These demilunes are observed in the submandibular glands of humans and in the sublingual glands of both humans and rodents.
