No. Steel doors are comprised of either a polyurethane or polystyrene core with a steel skin over the top. A solid steel door would be prohibitively heavy and would most likely tear out the hinges. Steel between 16 and 24 gauge is used for the skin of the door. A wood frame, called a stile, surrounds the perimeter of the door. None of the polyurethane or polystyrene is visible on the edges of the door.

## **Personnel Doors: Hollow Metal vs. Solid Core Wood | R&S ...**

Solid-core wood doors can be used for either exterior or interior doors. Solid-core wood doors are constructed with quality wood veneers glued over a solid core of engineered or composite wood, giving them the primary virtues of both solid wood and hollow-core doors: they are relatively affordable yet quite sturdy and solid in feel.

Commercial wood doors with lite kits and glass (or windows) not only provide light to a room, they ensure safety, too. Doors with lites, provide safety for well-traveled corridor doors, allowing to see if others are entering the room. 1-3/4" Solid Core Wood Door Includes Steel Vision Lite Frame w/ Glass

## **Commercial Wood Doors with Glass Lite Kits**

The doors may be made of solid wood, stile and rail construction, or have a veneer over a wood block, particleboard or MDF core. The doors can be heavier than steel doors. The thicker wood used in exterior doors decreases the sound transmission. A solid wood door will range from STC 35 to 49; the heavier the door, the better the sound suppression.

## **STC Ratings for Doors - Better Soundproofing**

A: These doors can be used for exterior applications, although without warranty as is the case for practically all flush solid core wood doors. However we can order a door for you built with structural lumber as a core and Type II exterior grade glue. Please feel free to reach out to our sales department at the link mentioned below to process an order or request a quote.
