Spring MVC Tutorial - Tutorialspoint
Spring MVC Tutorial. Spring MVC is a web Model-View-Controller framework built on Servlet API. It is used to build web applications. The MVC framework works around central servlet called DispatcherServlet. It dispatches the requests to the controllers and offers other functionalities used to develop web-applications.

Spring MVC Tutorial - Tutorial And Example
The Spring Web MVC framework provides Model-View-Controller (MVC) architecture and ready components that can be used to develop flexible and loosely coupled web applications. The MVC pattern results in separating the different aspects of the application (input logic, business logic, and UI logic), while providing a loose coupling between these elements.
